SUMMARY

Informatics Engineering student at UIN Syarif Hidayatullah Jakarta focused on AI Engineering, with experience building RAG applications and Arabic text processing pipelines. Developing LLM annotation workflows for the ALII project and expanding full-stack skills with Next.js, TypeScript and Supabase.

WORK EXPERIENCE

Data Engineer Intern | ALII, UIN Jakarta **Apr 2026 - Sep 2026**

KKN in campus | Hadith data and LLM annotation; project continued after placement

- Built chunked Python/Pandas ingestion for a 1 GB Arabic hadith dataset and converted a MySQL translation dump to CSV through SQLite.
- Matched 5,348 source records against 5,362 translation entries using Arabic text normalization, TF-IDF and cosine nearest-neighbor search; retained 5,331 pairs at a similarity threshold of 80%.
- Generated 5,331 Markdown wiki pages containing Arabic text, Indonesian translations, narrator metadata and cross-references.
- Developed a prototype LLM annotation pipeline for narrator chains, transmission relations, entities, topics and summaries; added Arabic/Latin narrator identity resolution against reference data.
- Implemented JSON structure and reference validation, checkpointing and resumable JSONL writes for annotation runs.

PROJECT EXPERIENCE

Waguri AI | Personal Project **Jan 2026 - Present**

Interactive portfolio assistant | Python, LangChain LCEL, Streamlit

- Built and deployed a RAG portfolio assistant with Streamlit and LangChain LCEL, using Llama 3.3 through the Groq API for responses.
- Implemented document loading and chunking, HuggingFace all-MiniLM-L6-v2 embeddings and FAISS retrieval to ground answers in portfolio content.
- Added prompt constraints to limit off-topic requests and instruction overrides, plus audio playback using gTTS and BytesIO.

Realtime Point of Sales | Personal Project **In development**

Admin web application | Next.js App Router, React, TypeScript, Supabase

- Implemented login validation, Supabase authentication and session middleware, an admin dashboard and paginated profile queries for user management.
- Added Zustand state, reusable Radix/shadcn UI components and a SQL profile migration with an Auth synchronization trigger. POS transactions are planned.

Machine Learning | Dicoding Course Project **Apr 2026**

Customer segmentation and classification

- Built customer segmentation with K-Means and trained Decision Tree and Random Forest classifiers on transactional data.

EDUCATION

Universitas Islam Negeri Syarif Hidayatullah Jakarta **2024 - 2027 (Expected)**

Bachelor of Engineering (S.T.) in Informatics Engineering

GPA: 3.54 / 4.00. Coursework: Algorithms & Data Structures, Artificial Intelligence, Database & Web Engineering.

CERTIFICATIONS

- Belajar Machine Learning untuk Pemula - Dicoding Academy, Apr 2026
- Memulai Pemrograman dengan Python - Dicoding Academy, Mar 2026
- Belajar Dasar AI - Dicoding Academy, Feb 2026
- English Language Proficiency Certificate - Center for Language Development, UIN Jakarta

SKILLS

AI & Data: RAG, LangChain LCEL, FAISS, HuggingFace embeddings, LLM annotation, entity resolution, ETL, text normalization, TF-IDF, Pandas, scikit-learn

Languages: Python, TypeScript, SQL, HTML, CSS

Web & Tools: Streamlit, Next.js, React, Supabase, Zustand, Git, Linux shell

Communication: Indonesian (Native), English (Conversational)
